

no trained network around it

a trained encoder or decoder around it

the dynamics is fixed

by design or at random

Untrained, designed

nothing is fitted anywhere in the system

Oscillator Ising machines
(Hopf cochlea, the biological case)

Untrained, with a trained readout

the readout is fitted, the dynamics is not

ESN · LSM
RON · Spintronic reservoir

the dynamics is trained

gradients flow through it

Trained, designed

gradients reach the dynamics, and nothing else

Un-0
WONN

Trained, inside a trained network

gradients reach the dynamics and its scaffolding
