

(a) A phase oscillator

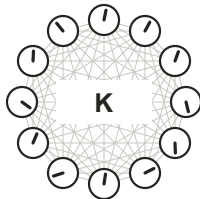

the state space is a circle
one angle θ , advancing at rate ω
Kuramoto · Winfree · Sakaguchi

(b) An amplitude-phase oscillator

Stuart–Landau relaxes onto a limit cycle
the state space is a plane
a radius r and an angle θ
Stuart–Landau · coRNN · LinOSS

(c) A network of them

each hand is one oscillator's phase
the state space is N of the above
 N phases, coupled with strength K
every system in this survey
